## SEMINAR SCRIPT

# Surge Protective Devices (SPDs) Technologies – Parameters – Testing

Total pages: 46  
Attachments: 0

## Content

1	Surge protective devices .....	6
2	Technologies.....	6
2.1	History.....	6
2.2	Surge Protective Devices (SPDs) versus isolating spark gaps (ISGs) .....	6
2.3	Classifications .....	7
2.3.1	Overvoltage response characteristics .....	7
2.3.1.1	Voltage limiting (clamping) .....	7
2.3.1.2	Voltage switching (crowbar) .....	8
2.3.1.2.1	<i>Combination of switching and limiting</i> .....	9
2.3.2	Occurrence of follow currents .....	9
2.3.3	Leakage current.....	9
2.3.4	End of life behaviour (failure mode).....	10
2.3.4.1	Short circuiting SPDs.....	10
2.3.4.2	Overstressed fault mode for telecom and signalling SPDs.....	10
2.3.5	SPD disconnectors, protection functions and status indicators .....	12
2.3.5.1	Thermal protection – thermal disconnecter .....	12
2.3.5.2	Leakage current protection.....	12
2.3.5.3	Overcurrent protection.....	12
2.3.6	Means for short circuiting an SPD, protection functions and status indicators .....	13
2.3.7	Number of ports (terminals) and “feed through” capability .....	13
2.3.8	Specific classifications for SPDs used in low-voltage power systems .....	13
2.3.8.1	Discharge capabilities – surge protection versus lightning protection and SPD location ....	13
2.3.8.1.1	<i>Class I tests – Type 1 (T1) SPDs – SPDs marked “T1”</i> .....	14
2.3.8.1.2	<i>Class II tests – Type 2 (T2) SPDs – SPDs marked “T3”</i> .....	14
2.3.8.1.3	<i>Class III tests – Type 3 (T3) SPDs – SPDs marked “T3”</i> .....	14
2.3.8.1.4	<i>SPDs complying with more than one test class / type designation</i> .....	14
2.3.8.2	SPDs only for connection between Neutral and Earth (N-PE SPDs).....	15
2.3.9	Specific classifications for SPDs used in telecom and signalling systems.....	15
2.3.9.1	Discharge capabilities – surge protection versus lightning protection and SPD location ....	15
2.3.9.1.1	<i>SPD category D1 – SPDs marked “D1”</i> .....	16
2.3.9.1.2	<i>SPD category C2 – SPDs marked “C2”</i> .....	16
2.3.9.1.3	<i>SPD category C1 – SPDs marked “C1”</i> .....	16
2.3.9.1.4	<i>SPD category C3 – SPDs marked “C3”</i> .....	16
2.3.9.2	Current limiting function.....	16
2.4	Specific topologies and designs of SPDs and their characteristics.....	16

2.4.1	Series combination of switching and limiting components .....	17
2.4.2	Parallel combination of switching and limiting components .....	19
2.4.3	Modes of protection and connection types versus configuration .....	20
2.4.4	Portable SPDs .....	22
2.4.5	Topologies and designs only used for SPDs for power systems .....	22
2.4.5.1	Multiple gap constructions .....	22
2.4.5.2	Triggered gap constructions .....	23
2.4.6	Topologies and designs only used for SPDs for telecom and signalling systems .....	24
2.5	Environmental service conditions, mounting and accessibility .....	25
3	Main parameters for SPDs .....	25
3.1	General parameters for all SPDs .....	25
3.1.1	AC and frequency or DC .....	25
3.1.2	Continuous operating voltage .....	26
3.1.3	Voltage protection level, limiting voltage, residual voltage .....	27
3.1.4	Temporary overvoltages – power frequency overvoltages .....	27
3.1.5	Rated load current – rated current .....	28
3.1.6	Total discharge current $I_{Total}$ .....	28
3.2	Specific parameters for SPDs used in low-voltage power systems .....	28
3.2.1	Short-circuit current rating $I_{SCCR}$ and follow current interrupt rating $I_{fi}$ .....	28
3.2.2	Maximum discharge current $I_{MAX}$ .....	29
3.2.3	Voltage drop for two port SPDs .....	29
3.2.4	Load-side surge withstand capability for two-port SPDs .....	29
3.2.5	Voltage rate of rise $du/dt$ .....	29
3.2.6	Transition surge current rating for short-circuiting type SPD $I_{trans}$ .....	29
3.3	Specific parameters for SPDs used in telecom and signalling systems .....	29
3.3.1	Impulse reset time .....	30
3.3.2	Transmission characteristics .....	30
3.3.3	Insulation resistance .....	30
3.3.4	Current response time and current reset time .....	30
4	Test procedures .....	31
4.1	Test impulses and impulse generators .....	31
4.1.1	Impulse waveshapes .....	31
4.1.1.1	1,2/50 $\mu$ s voltage impulse .....	31
4.1.1.2	8/20 $\mu$ s current impulse .....	32
4.1.1.3	10/350 $\mu$ s (10/250 $\mu$ s) lightning impulse current .....	33
4.1.1.4	Combination wave 1,2/50 $\mu$ s for voltage and 8/20 $\mu$ s for current .....	34
4.1.1.5	Other waveforms used for SPDs for telecom and signalling systems only .....	34
4.1.1.5.1	Combination wave 10/1000 $\mu$ s for voltage and current .....	34
4.1.1.5.2	Combination wave 10/700 $\mu$ s for voltage and 5/320 $\mu$ s for current .....	35
4.1.1.5.3	Combination wave 100 V/ $\mu$ s linear rise for voltage and 10/1000 $\mu$ s for current .....	35

4.1.1.5.4	Combination wave 1 kV/ $\mu$ s linear rise for voltage and 10/1000 $\mu$ s for current .....	35
4.1.2	Generator topologies and their implication on testing .....	35
4.1.2.1	Pure voltage impulse generators.....	35
4.1.2.2	Pure current impulse generators .....	35
4.1.2.2.1	Direct discharge type .....	36
4.1.2.2.2	Crowbar type.....	36
4.1.2.3	Combination wave generators.....	37
4.2	Coupling of test impulses and decoupling of power supply.....	38
4.2.1	Coupling of the test impulses to the test sample(s).....	38
4.2.2	Decoupling of the test impulses from the power supply (back filters) .....	38
4.3	Impulse testing and tolerances .....	38
4.4	Measurement accuracy and measurement uncertainty .....	39
4.4.1	Voltage probes and their arrangement and attachment.....	40
4.4.2	Current probes.....	41
4.5	SPD versus SPD-assembly and mode of protection versus current path.....	41
4.6	Power supplies .....	42
4.7	Measured limiting voltage and voltage for clearance determination ( $U_{max}$ ).....	43
LITERATURE.....		44
General .....		44
Surge Protective Components, Surge Protective Devices .....		44
Testing techniques and test equipment.....		45
